David Hounshell's widely acclaimed history explores the American genius for mass production and traces its origins in the nineteenth century American system of manufacture. Previous writers on the American system have argued that the technical problems of mass production had been solved by armsmakers before the Civil War. Drawing upon the extensive business and manufacturing records of leading American firms, Hounshell demonstrates that the diffusion of arms production technology was neither as fast nor as smooth as had been assumed. Exploring the manufacture of sewing machines and furniture, bicycles and reapers, he shows that both the expression of mass production and the technology that lay behind it were developments of the twentieth century attributable in large part to the Ford Motor Company. Hounshell examines the importance of individuals in the diffusion and development of production technology and the central place of marketing strategy in the success of selected American manufacturers. Whereas Ford was the seedbed of the assembly line revolution, it was General Motors that initiated a new era with its introduction of the annual model change. With the new marketing strategy, the technology of the changeover became of paramount importance. Hounshell chronicles how painfully Ford learned this lesson and recounts how the successful mass production of automobiles led to the establishment of an ethos of mass production to an era in which proponents of Fordism argued that mass production would solve all of America's social problems.
